
MY FIRST MCP

PROJECT INITIATION

PRESENTER: Technical Lead

DATE: August 27, 2026

CONTENTS

01 Title Slide

02 The Problem & Our Solution

03 System Architecture

04 Five MCP Tools

05 What I Would Build Next

My First MCP

AI-Powered Task Management Server

Core Features

Five MCP Tools for automated task handling.

Data Strategy

Local JSON Storage for efficient data persistence.

Security

Secure Validation ensuring protocol integrity.

Presentation

Presented by: Malak Qandil
Entesar Qandil

[Demo Day – V1.0.0](#)

The Problem & Our Solution

The Problem

Task management is disconnected from AI; assistants cannot manage tasks without a tool layer.

Our Solution

An MCP server acts as the bridge connecting AI clients to a real task-management system for stateless operations.

How It Works

Flow: Natural Language → AI → MCP → Task Operations

Example: "Show me all my pending tasks" triggers `list_tasks`

System Architecture

Data Interaction

Establish a new standard for AI data interaction via validated flows to local storage.

Diagram Flow

User/AI Client (Language) → MCP Server (Validation) → Task Service → Local data/todos.json.

Security Gateway

Ensures protection through Input Validation, Safe File Paths, and Network Protection.

Clean Visual Structure

A diagram-driven framework that converges validation, logic, and secure local storage for seamless AI operations.

Five MCP Tools

Tool	Purpose	Example ⓘ
<code>add_task</code>	Create a task	<code>{"title": "Study MCP"}</code>
<code>list_tasks</code>	List/filter tasks	<code>{"status": "pending"}</code>
<code>complete_task</code>	Complete a task	<code>{"id": "3"}</code>
<code>update_task</code>	Update task title	<code>{"id": "3", "title": "Learn MCP"}</code>
<code>delete_task</code>	Delete a task	<code>{"id": "3"}</code>

WHAT I WOULD BUILD NEXT

PRODUCTION STORAGE

Migrate local JSON to professional databases for enhanced scalability and reliability.

MULTI-USER ACCESS

Implement authentication to support secure, personalized task sets and individual user accounts.

SYSTEM QUALITY

Deepen dashboard integration and implement automated testing via robust CI/CD pipelines.

ADVANCED FEATURES

Introduce search functionality, task priorities, deadlines, and smart notification reminders.

Status: Ready to Demo • Public • Tagged v1.0.0 • Fresh-Clone Verified
